Summary

Backend-focused CS undergrad who ships production-grade Spring Boot APIs with JWT auth, OAuth 2.0, and Docker. Built 3 full-stack systems including an AI career platform for the Razorpay BuildAthon 2026. Proficient in Java, Spring Security, Hibernate ORM, and test-driven development with JUnit 5.

Education

National Institute of Technology, Srinagar Srinagar, J&K
B.Tech – Computer Science & Engineering | CGPA: 7.46 / 10.0 *Aug 2024 – May 2028 (Expected)*

Technical Skills

Languages: Java (HackerRank 5-Star Gold), C++, SQL
Backend: Spring Boot 3.x, Spring Security, Hibernate ORM, Spring Data JPA, JDBC
Security & Auth: JWT (jjwt 0.11.5), OAuth 2.0, BCrypt, Stateless Session Management
Testing: JUnit 5, Mockito, Integration Testing, Postman API Testing
DevOps & Tools: Docker, Docker Compose, GitHub Actions CI/CD, Git, Maven, IntelliJ IDEA
Databases: MySQL 8.0
Frontend: React 19, HTML5, CSS3, JavaScript (ES6+), Vite, Axios
Patterns: REST API Design, MVC, Repository Pattern, Singleton, Factory, Builder, DTO Pattern

Projects

HireIQ – AI-Powered Job Assistant | ***Spring Boot 3.3, React 19, Claude API, Docker, MySQL, JWT*** Aug 2026

- Built a full-stack AI career platform for the Razorpay AI BuildAthon 2026, shipping 5 AI features – resume scoring, bullet rewriting, keyword injection, outreach generation, and application tracking.
- Reduced resume analysis turnaround to under 3 seconds per request by integrating the Anthropic Claude API via structured prompt pipelines that convert resume-JD pairs into ranked fit scores and prioritized fix alerts.
- Eliminated multi-step environment setup by containerizing the full stack (Spring Boot, React SPA, MySQL 8.0) with Docker Compose, enabling one-command local deployment.
- Secured 7 REST endpoints with Spring Security, JWT, and OAuth 2.0; enforced zero sensitive-field leakage via a ControllerAdvice global exception handler and full DTO layer.
- Validated business logic across 15+ service methods by writing JUnit 5 unit tests with Mockito mocks, achieving 80%+ line coverage on the core API layer.

Student Login Portal | ***Spring Boot, Spring Security, JWT, Hibernate/JPA, MySQL*** Jan 2025 – Apr 2025

- Designed a 4-layer Spring Boot backend (Controller / Service / Repository / DTO) supporting 2 user roles with strict MVC separation, enabling independent iteration on API, business, and data layers.
- Blocked 100% of unauthorized access across 6 endpoints via a stateless Spring Security filter chain – JwtAuthFilter, UserDetailsService, and DaoAuthenticationProvider – covering admin and student routes.
- Eliminated plaintext credential storage by pairing JWT token generation (jjwt 0.11.5) for stateless sessions with BCrypt password hashing at rest.
- Led a feature-branch Git workflow (main / dev / feature/*) across a 2-person team, integrating a teammate's Python microservice via versioned REST contracts across 40+ commits.

Google Forms Clone | ***Java, Hibernate ORM, MySQL, JDBC, OOP Design Patterns*** Aug 2024 – Nov 2024

- Designed a 4-entity normalized MySQL schema (Forms / Questions / Users / Responses) with full referential integrity, supporting dynamic multi-type form creation without schema migration.
- Prevented data corruption on concurrent submissions by engineering a transaction-safe DAO layer with Hibernate ORM, providing full rollback support on any persistence failure.
- Cut response retrieval time across 15+ form submissions by replacing full-table scans with targeted HQL aggregation queries.

Achievements

HackerRank Java 5-Star Gold Badge 2025

- Ranked in the top 10% of Java practitioners on the platform, solving 100+ problems spanning data structures, algorithms, and advanced OOP.
